

The BOOTH AUTOMATIC JACK

MADE OF MALLEABLE IRON

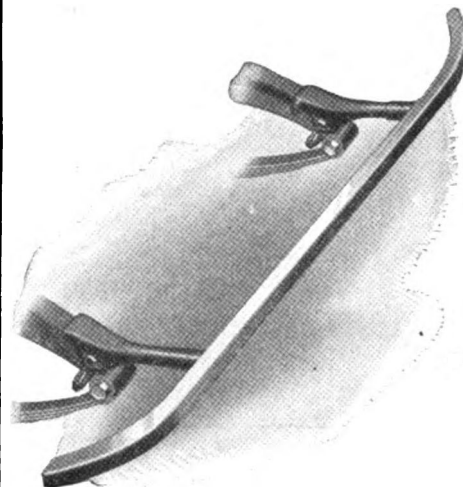

A Jack you can't break. Bang it around anyway you want to. Slam it up against a lamp post. Throw it around any old way—the Booth Automatic is still on the job. It's built to stand not only all the use you can give it, but all the abuse it can get.

Boost your car as high as you want to, do your work, then kick the release pin on the side and it slides right back to earth.

Notice the deep cutting of the tempered ratchet, the detached handle bent at the fulcrum, the rib-reinforced stanchion, the strain proof foot.

Buy a Booth. It's the right Jack for the garage, either public or private. It belongs in the tool box of every car.
